WORKING PROTOTYPE | *Atmosphere* Audio Visualization

Name Atmosphere Audio Visualizer

Author Elise Fung

Tagline A cosmic-inspired audio visualization of Kaskade's album Atmosphere.

Description This audio visualizer was designed for Kaskade's album Atmosphere and can be experienced as a whole album or song by song. Inspired by the theme of the album, this visualizer mimics the organic shapes and colors of the universe to accompany the music.

Demo This final project is intended to run as a desktop sketch since it includes imported audio files. I have created two demo videos, that are included in the zipped folder, to be used in the presentation. These two videos show the visualization for two songs off the album, and I will only be showing the class the first minute of each video in the presentation.
